Industrial Agricultural Center **Date Constructed: 1986**

Names: Wittman Complex (dedicated January 17, 1997)
Industrial Agricultural Center

As part of the 1986 rebuilding process of the Mechanical-Technical Building, the Industrial Agriculture Center was built on the South side of campus. It is a single-level facility fitted with large lab areas for training in auto-body repair, in the repair of industrial and agriculture equipment, and in the repair of heating, ventilation, and air conditioning (HVAC) systems.

In 1996, a classroom/laboratory and storage facility was added to the complex to address critically needed storage space for the then School of Technology's training aides and to provide classroom and laboratory space for the Major Appliance Service Technician Program. The facility also houses a 25-seat general use interactive classroom.

In January 1997, the Industrial Agricultural Center was renamed the Wittman Complex in recognition of the long-standing commitment of the Wittman family—especially Barthel (Bob) Wittman—to higher education and to Lewis-Clark State College.

In 2008, the College entered into a partnership with Lane Community College (Eugene, Oregon) to establish a dental hygiene program. A classroom laboratory and x-ray area was constructed, and the first classes were held in the fall semester of the 2008-2009 school year.
