

Poster Information

Your poster needs to convey the relationship between engineering and the egg drop project. Your audience is high school students and the general LC student population.

Include the following in your poster:

- 1) design justification,
- 2) physics behind the design, (the impulse/momentum theorem)
- 3) building your packaging,
- 4) data from the fall (this includes analysis of the fall velocity and what the terminal velocity of your package would be or was); and,
- 5) your team.

On a separate sheet of paper, list what each member did in support of this project. Turn this in to me on the day of your presentation.

Poster logistics:

1. Setup for poster in Powerpoint: file >> page setup>> custom >> size is ANSI E (which is 34 x 44 inches) choose either portrait or landscape for poster orientation
2. email your poster to me (jligh@lsc.edu) by November 30, midnight.
