Library DPW Project #14-151

Completed in 1991 at a cost of about $6 million, the LCSC library provides 55,000 square feet of efficient working space for its users, who are primarily students, faculty, and staff. In 2014 the Department of Public Works funded $320,000 for the upgrade of the heating and cooling system in the Library and to create a new (non-Halon) fire suppression system in the Library computer server room. The design included the replacement of the existing Library chiller unit along with all new hardware, and electronics. The old chiller unit below is shown being removed. The project also includes upgrading the teleconference control center. The project is 40% complete as of May 1, 2015.
