The Fire Service Technology A.A.S degree program at Lewis-Clark State College is offered for members of a paid or volunteer fire department. It is a 60 credit degree which gives credit for the in-service classes offered through the Idaho State Division of Professional-Technical Education, which are taught locally by certified trainers. Forty-four (44) credits are granted by registering for FRSV 100 Fire Training Technology after all listed Emergency Service Training courses have been completed and verified by Lewis-Clark State College. The cost of the 44 credits is $440 ($10/credit transcription fee).

Special Program Notes

The division does not offer any of the required certifications, or related coursework. Rather the division operates as a home to the opportunity to translate documented training and certification into degree programs. Program advising centers around general education and bulk credit transfer procedure.
